**DETAILED ACTION*****Drawings***

The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the die (1,2), insert (12) and coolant die (3,4,5,6) must be shown or the feature(s) canceled from the claim(s). Applicant filed a new specification with no new drawings. No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Blue (6,598,451) in view of Zauhar (7,107,811). Blue discloses cooled ironing dies (4,6,8) having inserts (14,16,18) for ironing can bodies wherein the dies (4,6,8) have inlet ports (24,26,28,30) and outlet ports (34,36,38,40) for flowing cooling medium through the dies. Adjacent spacer dies (10,12) separate the ironing dies. Blue does not disclose air inlets with the dies. Zauhar teaches that it is known to provide at least an adjacent coolant spacer member (17) and dies (13,15,18) having fluid apertures (27-31) and air inlets (28,30) and that biasing means (60,61) are used to float the dies and align them. It would have been obvious to one skilled in the art at the time of invention to provide the dies of Blue with air inlets and biasing means as taught by Zauhar in order to align the dies during a cooling/ironing operation.

Claim 8-11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Blue in view of Zauhar and further in view of Blue (6,598,450). Blue in view of Zauhar does not disclose a cooled punch. Blue (6,598,450) teaches that it is known to have inner (8) and outer (10) tubes in a ram (4) for the purpose of cooling the ram. It would have been

obvious to one skilled in the art at the time of invention to provide Blue in view of Zauhar with ram cooling means as taught by Blue (6,598,450) in order to control a temperature of the punch and the dies.

**Conclusion**

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
